

## Leveling column

The new **Levelling Column**, which perfectly fits the new XPRO 190 and 055 tripods, enables the quick levelling of photo or video heads without the need for time-consuming adjustments to the length and angle of each single tripod leg. Thanks to the levelling half ball mounted at the top of the tripod's centre column, the top plate angle is now independent from the rest of the tripod. The half ball is locked and unlocked via a turning grip on the bottom of the centre column. The half ball-mounted plate has a 3/8" male screw for attachment to a photo or video head, and a bubble spirit level for even easier use.

## Shorter centre column

The **shorter column** improves the tripod's positioning flexibility, perfectly fitting the new XPRO 190 and 055 series. If you need to work with legs set at the third angle of inclination (about 60°) but still need to be able to move the camera up and down to achieve perfect adjust your shot perfectly, this shorter column replaces the one supplied with the tripod.
